Who have become victims of solitary vice, that dreadful and destructive habit which annually sweeps to an untimely grave thousands of young men of exalted talent and brilliant intellect who might otherwise entrance listening schators with the thunders of their eloquence or wake to ecstacy the living lyre, may on it with full confidence.

Immediately cured and full vigor restored. This distressing affliction—which renders life a burden and marriage impossible, is the penalty paid by the victim for improper indulgence. Young people are apt to commit excesses from not being aware of the dreadful consequences that may ensue. Now who that understands this subject will deay that procration is lost somer by those falling into improper habits than by prudent? Bosides being deprived of the pleasure of healthy offsprings, the most serious and destructive symptoms of both body and mind arise. The system becomes deranged, the physical and mental functions weaken. Loss of procreative powers, necroos irritability, dyspojests, palpitation of the heart, indigestion, constitutional debility, wasting of the frame, cough, consumption and death.

A CURE WARRANTED. Persons rained in health by unlearned pretenders who keep them trifling month lafter month taking seisonous and injurious compounds, should apply immediately.

DR. FISHBLATT, graduate of one of the most eminent colleges of the United States, has effected some of the most astonish-ing cures that are ever known; many troubled with ringing in the ears and head, when askeep, great ment of the mind were cured immediately.

TAKE PARTICULAR NOTICE, Dr. F. addresses all those who have injured themselves by improper includence and solitary habits which rain both body and mind, untiting them for business, study, society or marriage.

These are some of the melancholy effects produced by the early habits of youth, viz. Weakness of the back and limbs, pains in the head and illumess of sight, loss of muscular power, pulpitation of the heart, dyspepsia, nervous irritability, derangement of digestive functions, dentity, consumption.
